Method Anti-parasitic drug residue

It consists in a development of multi residue method for the determination of anthelmintic residues in beef. Methods exist To determine if there is any risk to humans consuming beef if positives are found. The goal is to verify that beef consumed by Europeans is free of residues. Especially the UPLC-MS/MS Method, is the first multi-class multi-residue method for the quantitation and confirmation of 38 anthelmintic drugs.

More information

Marination

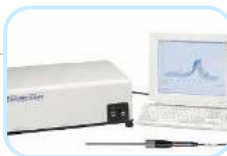

Tenderness is the primary economic factor for beef palatability. It can improved by different processes such as blade tenderization and infection.

A study showed the effects of all of the processes or tenderness and demonstrate that processes choice directly impact on cooking losses.

Raman Spectroscopy

Raman spectroscopy is a food analysis, it permits a rapid characterization of lipids in foods. There are two main strategies for analysis of lipid composition using Raman spectroscopy:

Quantitative measurements of bulk parameters and single fatty acids and Raman screening of samples with different lipid composition. This method offers advantages such as : Cost reduction and Screening of hundreds of samples possible.

More information

Dear,

We are pleased to present the third edition of "The minute Beef", the essential information of the European project ProSafeBeef.

You will find in this issue, new technologies for the meat industry and information about all the events organization.

Welcome and happy reading!

Receive the next issue

Events Information ...

The Events catalogue is arrived!

You will find all information on events in the European project **ProSafeBeef**. Events are organized by the dissemination team. We can suggest you training-sessions and demonstrations. The number of participants varies between the location of the organization and the technical feasibility. The events vary from a half-day and two days depending on the theme.

They may include theoretical and practical parts.

The speakers are experts in their field of activity in the meat sector. They come from all over Europe. Most of them involved into the project.

They are all experienced in the meat industry since decades.

These events are organized through Europe in industrial companies or in research centers and technology.

Want to organize an event? Please contact us and **click here**.

Conference and stakeholder demonstration event

7th to 9th February 2012 in Dublin
